PRODUCT NAME: Flowrite

TEAM NAME: A ASMR

REVISION NUMBER: 0

REVISION DATE: 12/01/2019

INTRODUCTION

Flowrite is a tool that allows you to journal without distractions. Its major feature is the ability to fade text as you type in order to provide a distraction free experience while typing.

INSTALLATION

The Following installation guide presents steps to download the application locally from git. The process requires you to use Terminal.

- In order to install a local version of the application, you will need to have **'git'** on your machine. The download instructions for git can be found at https://git-scm.com/book/en/v2/Getting-Started-Installing-Git

- After installing git run the following command:

```
git clone https://github.com/flowriteapp/flowrite.git
```

- The next step assumes that you have the **Node.js** and **npm** installed on your machines. You can find the installation guides for these at https://www.npmjs.com/get-npm

```
npm run build
```

```
npm install
```

On MacOS :

```
npm run electron-pack
```

On Linux :

```
npm run electron-pack-linux
```

- This should build either a .dmg or a .AppImage file based on your operating system.

USER GUIDE

The current release of the application is not available for windows download at the moment. In order to successfully install and run the application, the user should have access to git, Node.js and npm on their machines.
